METHOD FOR TREATING ASTHMA USING
OPTICALLY PURE R(-) ALBUTEROL

Abstract of the Disclosure

SA 31

05 The optically pure R(-) isomer of albuterol,
which is substantially free of the S(+) isomer, is a
potent bronchodilator for relieving the symptoms
associated with asthma in individuals. A method is
disclosed utilizing the optically pure R(-) isomer
of albuterol for treating asthma while minimizing
10 the side effects associated with ^{chronic administration of racemic} albuterol.
